Trapezoid Clear Cornea Knives

Implant Knives

Crescent Knives

Vitrectomy Knives

Product Characteristics

The Swiss Cataract Knives of Ziemer Ophthalmic Systems are ideal instruments for cataract surgeons to perform gentle, precise and safe cataract surgery. Handles have a unique shape with triangular cross-section for improved handling. The chemical etching treatment provides superior blade sharpness and excellent gliding characteristics are achieved through a biocompatible coating of the blades.

Ziemer's Swiss Cataract Knives are individually packed in quick peel open pouches in units of 6. Sterile and for single use only. Made in Switzerland by Surgical Instrument Systems (SIS), a Ziemer Group Company.

Diversity

The Swiss Cataract Knives product portfolio comprises a wide range of cataract knives. Due to their finely graduated widths, variety of shapes and angles the choice of knife can be ideally coordinated according to the surgeons needs and type of incision.

Chemical etching blade treatment

- Superior blade sharpness
- Improved penetration characteristics

Unique triangular handle shape

- Improved handling
- Easy recognition of blade pointing direction

Dull, non reflecting blade surface

Improved blade's visibility during surgery
